PROJECTS

Talo plus
Talo + is a full-stack web application inspired by StackOverflow, tailored for healthcare. It allows users to post medical questions about symptoms or health concerns, and receive answers from medical professionals like doctors, nurses, and medical students.

The goal of Talo +

- post medical questions about symptoms or health concerns
- receive answers from medical professionals like doctors, nurses, and medical students.
- A community-driven hub where knowledge is shared and preserved

Fect-Chat
Fect-Chat is a modern, full-stack chat application built with the MERN stack (MongoDB, Express.js, React, Node.js). It offers real-time messaging capabilities, user authentication, and a sleek, responsive design.

features

- Real-Time Messaging: Instant communication between users.
- User Authentication: Secure registration and login functionality.

PROJECTS

- Responsive Design: Optimized for both desktop and mobile devices.
- User Profiles: Personalized user information and avatars.
